

# Meet the BoostUp

## GRAND FINALISTS

3D Printing service with collaborative deposition heads for fabrication time optimization.

3D Food printing to develop plant-based seafood.

Cross-platform and modular one-stop solution for robotic additive manufacturing.

An augmented reality visor to support operators in production lines, offering a collaborative virtual training platform.

It is redefining interactions with machinery & equipment by enabling Augmented Reality powered processes in service, maintenance & quality related tasks.

Through high-precision radar technology & smart sensor software, they ensure customers get relevant data for intelligent control & monitoring of production environments.

A breakthrough technology for turning agricultural waste to plant-based alternatives for replacing disposable plastics.

First & only software editor in Europe focused on Smart Voice Assistant for technicians, operators & craft workers. Capable of offering an improved voice-assistance-based experience at work.

Application of MES solutions in the food & beverage industries, helping companies towards a Zero-Loss Manufacturing.

Handling equipment for grain storage, providing a wide range of grainhandling equipment and accessories.

Large-scale 3D printers to build houses with natural materials available on the territory, at a cost tending to zero.
